Can I Benefit from Compression Stockings?

Compression stockings are long stockings or socks made from fabric that gently squeezes your legs to help blood circulate back up to your heart. They are used to prevent lower leg swelling, help with conditions such as varicose veins, and can decrease the risk of developing blood clots in the legs. Compression socks are often recommended for travel, pregnancy, or for occupations where you are on your feet for long periods of time. Here at Sand Run Pharmacy, we offer several compression options and can even do custom orders. We stock **JUZO** products, which are locally made in Cuyahoga Falls.

Also, with the increase in traveling as people start to feel more comfortable about leaving their homes, there is always the increased risk of blood clots due to being seated for long periods of time during long car rides and airplane flights. Blood clots tend to occur when individuals are seated for long periods of time because your leg muscles help push the blood up from your legs back to your heart. Compression stockings help circulate the blood out of your lower legs to help prevent blood clots!

Stylish & Comfortable

The compression stockings we carry come in several different colors and styles that can match your style without looking like a medical product. We carry stylish compression socks for men and even sheer socks or hosiery for women. **Stop in and grab a pair for you and your loved ones today!**

Talk to your healthcare provider or one of our trained staff members who can help you choose the right option for you!

**Come and get your vaccinations
before school starts at
SAND RUN PHARMACY!**

Here at Sand Run Pharmacy, we have all of the vaccines that your children will need before they head back to school this month! We also have in stock all three of the **Covid-19 vaccines** and can take walk-ins Monday through Friday from 9am to 6pm on weekdays and 9am to 1pm on Saturdays. The Pfizer vaccine has been approved for **children as young as 12 years old.**

Due to the Covid-19 pandemic and the emergence of the Covid-19 vaccines, many routine vaccine rates have declined in recent months. The Advisory Committee on Immunization Practices (ACIP) estimates that during the time of the pandemic, **about 17 million** routine vaccines were missed. Now, as we start to go back to work and go back to school, it is important that we remember to catch up on the vaccines that are recommended such as the flu vaccine annually and the other recommended vaccines such as pneumonia, shingles, tetanus, hepatitis B, and meningitis. It is important to stay up to date on our vaccines as we begin to take off our masks and go back to life as normal. Many schools will be looking for kids to have all of their vaccines up to date before they return back for the fall.

The first person to return a completed word search will win a **free box of Akron on Deck playing cards!**
